Limited Review Report on Interim Financial Statements

**To the Board of Directors of
Suez Canal Bank (S.A.E.)**

Introduction

We have performed a limited review for the accompanying statement of financial position of Suez Canal Bank (S.A.E.) as at 31 March 2022 and the related statements of income, comprehensive income, changes in equity and cash flows for the three months then ended, and a summary of significant accounting policies and other explanatory notes. Management is responsible, for the preparation and fair presentation of these interim financial statements in accordance with the Central Bank of Egypt's rules pertaining to the preparation and presentation of the financial statements and measurement and recognition bases approved by its Board of Directors on 16 December 2008 as amended by the regulations issued on 26 February 2019 and the related Egyptian laws and regulations. Our responsibility is to express a conclusion on these interim financial statements based on our limited review.

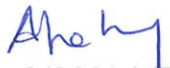

Scope of Limited Review

We conducted our limited review in accordance with Egyptian Standard on Review Engagements No. 2410, "Limited Review of Interim Financial Statements Performed by the Independent Auditor of the Entity." A limited review of interim financial statements consists of making inquiries, primarily of persons responsible for financial and accounting matters, and applying analytical and other limited review procedures. A limited review is substantially less in scope than an audit conducted in accordance with Egyptian Standards on Auditing and consequently does not enable us to obtain assurance that we would become aware of all significant matters that might be identified in an audit. Accordingly, we do not express an audit opinion on these interim financial statements.

Conclusion

Based on our limited review, nothing has come to our attention that causes us to believe that the accompanying interim financial statements do not present fairly, in all material respects, the financial position of the Suez Canal Bank (S.A.E.) as at 31 March 2022 and of its financial performance and its cash flows for the three months then ended in accordance with the Central Bank of Egypt's rules pertaining to the preparation and presentation of the financial statements and measurement and recognition bases approved by its Board of Directors on 16 December 2008 as amended by the regulations issued on 26 February 2019 and the related Egyptian laws and regulations relating to the preparation of these financial statements.

The attached notes from page (8) to page (41) are an integral part of these financial statements and to be read therewith.

1- Activity

Suez Canal Bank (SAE) established as a commercial bank in pursuance of the ministerial decree no. 55 of 1978, issued in the official Gazette on 4 March 1978 and in accordance with provisions of investment law no. 43 of 1974 and its amendments, which was superseded by law no. (8) Of investment guarantees and incentives the head office located In Elteraa St., No. 127, Ismailia - commercial register no 9709. General management located in 7 & 9 Abd El Kader Hamza St., Garden City, Cairo and the bank is listed in the Egyptian stock exchange.

Suez Canal Bank (S.A.E) provides retail, corporate and investment banking services in Arab Republic of Egypt through 49 branches and served by 1426 staff member at the date of the financial statements.

These financial statements have been approved for publishing by the board of director in May 30, 2022.

2-Summary of accounting policies

The principal accounting policies applied in the preparation of these financial statements are set out below. These policies have been applied for all presented years unless otherwise stated

A- Basis of preparation of financial statements

The financial statements are prepared in accordance with Central Bank of Egypt instructions approved by its Board of Directors on 16 December 2008. and according to IFRS 9 "Financial Instruments-measurement and classification" in accordance with the instructions of the Central Bank of Egypt (CBE) dated on 26 February 2019.

Reference is made to what was not mentioned in the instructions of the Central Bank of Egypt to the Egyptian Accounting Standards.

These financial statements have been prepared according to relevant local laws and regulations.

B- Subsidiaries and Associates

B-1 Subsidiary firms

Subsidiaries are all companies including (special purpose entities/SPEs) over which the bank has owned directly or indirectly the power to control the financial and operating policies, generally the bank owns more than one half of the voting rights. The existence and effect of potential voting rights that are currently exercisable or convertible are considered when assessing whether the bank has the ability to control the entity.

B-2 Associate firms

Associates are all companies over which the bank has owned directly or indirectly a major influence, but it doesn't control them ,or joint control them generally the bank owns between 20% and 50% of the potential voting rights.

The purchase method is used to account for the acquisition of subsidiaries by the bank, The cost of an acquisition is measured as the fair value of the assets, and/or asset given and/or equity instruments issued and liabilities on the bank or liabilities for acquisition company loans assumed at the date of exchange, plus costs directly attributable to the acquisition. Net assets including contingent liabilities assumed in a business combination are measured initially at their fair values at the acquisition date, irrespective of the minority interest. The excess of acquisition cost over the bank's share fair value in the net assets acquired is recorded as goodwill. If the acquisition cost is less than the fair value of the net assets, the difference is recognized directly in the income statement under the item "Other operating income/ expenses".

Accounting for associate in the financial statements is recorded by using equity method, Dividends are recorded when declared and deducted from assets proven value.

C -Segment reporting

A business segment is a group of assets and operations engaged in providing products or services that are subject to risks and returns that are different from those of other business segments. A geographical segment is a segment by which, provide products or services within a particular economic environment that are subject to risks and returns different from those of segments operating in other economic environments.

D - Foreign currency translation

D-1 Functional and presentation currency

The financial statements are presented by Thousand Egyptian Pound, which is the bank's functional and presentation currency.

D-2 Foreign currencies transactions and balances

The bank maintains its accounting records in Egyptian pound. Foreign currency transactions are translated into Egyptian pound using the exchange rates prevailing at the date of the transaction. Monetary assets and liabilities in foreign currencies are retranslated at the end of each year at the exchange rates then prevailing. Foreign exchange gains and losses resulting from settlement of such transactions and valuation differences are recognized in the income statement under the following items:

- Net trading income assets /liabilities for trading or net income.
- Other operating income (expenses) for the other items.
- Investments in equity instrument recognized at fair value through other comprehensive income.
- Changes in the fair value of monetary financial instruments in foreign currencies classified as investments available for sale (debt instruments) are classified as valuation differences resulting from changes in amortized cost of the instrument and differences resulted from changes in applicable exchange rates and differences resulted from changes in the instrument fair value. Valuation differences relating to changes in amortized cost are recognized in income statement under "Interest and similar income" while differences relating to changes in exchange rates are recognized under item "other operating income (expenses)". Differences resulting from changes in fair value are recognized under "fair value for financial statement through other comprehensive income" in the equity caption.
- Valuation differences resulting from non-monetary items include profits and losses resulting from changes in fair value such as equity instruments held at fair value through profits and losses, while valuation differences resulting from equity instruments classified as financial investments available for sale are recognized as "fair value for financial statement through other comprehensive income" under the equity caption.

E-Financial assets

Financial assets classified as amortized cost, fair value through other comprehensive income (FVTOCI) and fair value through profit or loss (FVTPL).

The classification depends on the business model of the financial assets that are managed with its contractual cash flow and is determined by management at the time of initial recognition.

Financial assets classified as amortized cost

The financial asset is retained in the business model of financial assets held to collect contractual cash flows. The objective from this business model is to collect contractual cash flows which represented in principal and interest. The sale is an exceptional event for the purpose of this model and under the terms of the standard represented in following:

- A deterioration in the credit capacity of the source of financial
- Less sales in terms of periodicity and value.
- Clear and certified documentation of the justification for each sale and its compliance with the requirements of the standard.

Financial assets classified as fair value through other comprehensive income

The financial asset is retained in the business model of financial assets held to collect contractual cash flows and sales.held to collect contractual cash flows and sales are integrated to achieve the objective of the model.

Sales are high in terms of turnover and value as compared to the business model retained for the collection of contractual cash flows.

Financial assets classified as fair value through profit or loss

The financial asset is held in other business models including trading, management of financial assets at fair value, maximization of cash flows through sale.

The objective of the business model is not to retain the financial asset for the collection of contractual or retained cash flows for the collection of contractual cash flows and sales. Collecting contractual cash flows is an incidental event for the objective of the model.

F – Offsetting of financial assets and financial liabilities

Financial assets and liabilities are offset when there is a legally enforceable right to offset the recognized amounts and there is an intention to settle on a net basis, or realize the asset and settle the liability simultaneously.

G - Interest income and interest expense

Interest income and expense for all interest-bearing financial instruments, except for those classified as held for trading or designated at fair value through profit or loss, are recognized within 'interest income' and 'interest expense' in the income statement using the effective interest

The effective interest rate method is a method of calculating the amortized cost of a financial asset or a financial liability and of allocating the interest income or interest expense over the relevant period. The effective interest rate is the rate that exactly discounts estimated future cash payments or receipts through the expected life of the financial instrument or, when appropriate, a shorter period to the net carrying amount of the financial asset or financial liability. When calculating the effective interest rate, the bank estimates cash flows considering all contractual terms of the financial instrument (for example, prepayment options) but does not consider future credit losses. The calculation includes all fees and points paid or received between parties to the contract that are an integral part of the effective interest rate, transaction costs and all other premiums or discounts.

When loans or debts are classified as non-performing or impaired, related interest income are not recognized but rather, are carried off balance sheet in statistical records and are recognized under revenues according to cash basis as per the following:

When collected and after recovery of all arrears for retail loans, personal loans, small and medium business loans., real estate loans for personal housing and small loans for businesses.

For loans granted to corporate, interest income is recognized on cash basis after the bank collects 25 % of the scheduling installments and after the installments continued to be regular for at least one year. In case the client is continuing in performing the payment, the calculated interest is added to the loan's balance without the marginal interest not included in the income until after paying the loan's balance in the balance sheet before the reschedule.

H - Fees and commission income

Fees and commissions related to loan and facilities are recognized as income when the service is rendered. Fees and commission income related to non-performing or impaired loans or debts are suspended and are carried off balance sheet and are recognized under income according to the cash basis when interest income is recognized in accordance with note (H) above. Fees and commissions which represent part of the financial asset effective rate is recognized as adjustment to the effective interest rate.

Commitment fees are recognized as revenue when there is probability that this loan will be used by the customer, as commitment fees represent compensation for the continuing interference to own the financial asset. Subsequently it's recognized as adjustments to the effective interest rate of the loan. If the commitment period passed without issuing the loan, commitment fees is recognized as income at the end of the commitment period.

Fees and commission related to debt instruments measured by fair value is recognized as income at initial recognition. Fees and commission related to marketing of syndicated loans is recognized as income when the marketing is completed and the loan is fully used or the bank kept its share of the loan using the effective interest rate as used by the other participants.

Fees and commission arising from negotiation, or participating in a negotiation to the favor of a third party as in share acquisition arrangements or purchase of securities or purchase or sale of businesses are recognized as income when the transaction is completed. Commission and fees related to management advisory and other services are recognized as income based on the contract terms, usually on a time-appropriation basis. Asset management fees are recognized over the year in which the service is provided.

I- Dividends income

Dividends are recognized in the profit and loss when the bank's right to receive those dividends is established.

J- Sale and repurchase agreements (repos)

Financial instrument sold under repurchase agreements are not derecognised from the statement of financial position. The proceed are shown in the liability side in the statement of financial position.

K- Impairment of financial assets

The Bank reviews all its financial assets except for financial assets that are measured at fair value through profit or loss to assess the extent of impairment as described below.

Financial assets are classified at three stages at each reporting date:

Stage 1 : Financial assets that have not experienced a significant increase in credit risk since the date of initial recognition, and the expected credit loss is calculated for 12 months.

Stage 2 : Financial assets that have experienced a significant increase in credit risk since the initial recognition or the date on which the investments are made, and the expected credit loss is calculated over the life of the asset.

Stage 3 : Impairment of financial assets whose expected credit loss is to be recognized over the life of the asset on the basis of the difference between the carrying amount of the instrument and the present value of expected future cash flows.

Credit losses and impairment losses on the value of financial instruments are measured as follows:

- The low risk financial instrument is classified at initial recognition in the first stage and credit risk is monitored continuously by the Bank's credit risk
- If it is determined that there has been a significant increase in credit risk since the initial recognition, the financial instrument is transferred to the second stage where it is not yet considered impaired at this stage.

If there are indicators of impairment of the financial instrument, it is transferred to the third stage.

The financial assets created or acquired by the Bank and include a high credit risk ratio for the Bank's low risk financial assets are recognized on the initial recognition of the second stage directly and therefore the expected credit losses are measured on the basis of expected credit losses over the life of the asset.

Significant increase in credit risk

The Bank considers that the financial instrument has experienced a significant increase in the credit risk when one or more of the following quantitative and qualitative criteria, as well as the factors relating to default, have been met.

Quantitative factors

When the probability of default over the remaining life of the instrument is increased from the date of the financial position compared to the probability of default over the remaining life expected at initial recognition in accordance with the Bank's acceptable risk structure.

Retail loans, micro and small businesses

- If the borrower encounters one or more of the following events:
- The borrower submits a request to convert short-term to long-term payments due to negative effects on the borrower's cash flows.
- Extension of the deadline for repayment at the borrower's request
- Frequent Past dues over the previous 12 months.
- Future adverse economic changes affecting the borrower's future cash flows.

Corporate loans and medium businesses

If the borrower has a follow-up list and / or financial instrument faced one or more of the following events:

- A significant increase in the rate of return on the financial asset as a result of increased credit risk.
- Significant negative changes in the activity and physical or economic conditions in which the borrower operates.
- Scheduling request as a result of difficulties facing the borrower.
- Significant negative changes in actual or expected operating results or cash flows.
- Future economic changes affecting the borrower's future cash flows.
- Early indicators of cash flow / liquidity problems such as delays in servicing creditors / business loans.
- Cancellation of a direct facility by the bank due to the high credit risk of the borrower.

Nonpayments

The loans and facilities of institutions, medium, small, micro and retail banking are included in stage two if the period of non-payment is more than (60) days and less than 90 days, (180 days for SMEs according to CBE circular dated 14, December 2021).

Note that this period (60 days) will be reduced by (10) days per year to become (30) days during (3) years from the date of application (year 2019).

Transfer between the three stages (1,2,3)

Transfer from second stage to first stage:

The financial asset shall not be transferred from the second stage to the first stage unless all the quantitative and qualitative elements of the first stage are met and the full arrears of the financial asset and the proceeds are paid.

Transfer from third stage to second stage:

The financial asset shall not be transferred from the third stage to the second stage until all the following conditions have been met:

- Completion of all quantitative and qualitative elements of the second stage.
- Repayment of 25% of the balance of the outstanding financial assets, including accrued segregated / statistical interest.
- Regularity of payment for at least 12 months

L- Computer software

Expenses related to development or maintenance of computer software are recognized as expenses on Income Statement at the time of incurring them. They are recognized as intangible assets in the expenses correlated directly to specific software that are under the control of the Bank from which the generation of economic benefits is expected whose cost exceeds more than one year. Direct expenses include the cost of employees on the software team in addition to appropriate share in related general expenses.

It is recognized as development cost in expenses if it leads to increasing or expanding the performance of the computer software above its original specifications, and is added to cost of the original software.

The amortization cost of computer software recognized as assets is for along the year from which it is expected to make use of in the manner not exceeding five years core system for the bank .

M- Property, plant and equipment

The bank represent land and buildings related to head office, branches and offices, and all property, plant and equipment are reported at historical cost minus depreciation and impairment losses. The historical cost includes the charges directly related to acquisition of property, plant and equipment items. Subsequent costs are included in the asset's carrying amount or are recognized as a separate asset, as appropriate, only when it is probable that future economic benefits associated with the item will flow to the bank and the cost of the item can be measured reliably. Maintenance and repair expenses are charged to other operating expenses during the financial period in which they are incurred. Land is not depreciated, depreciation of other assets is calculated using the straight-line method to allocate their cost to their residual values over their estimated useful lives, as follows:

Buildings and Properties	30-50 years
Integrated automated systems	5 years
Vehicles	5 years
Machinery and equipment	3-10 years
Fixtures and fittings	8-10 years
Furniture	5-20 years

The assets' residual values and useful lives are reviewed, and adjusted if appropriate, at each balance sheet date. Assets that are subject to amortization are reviewed for impairment whenever events or changes in circumstances indicate that the carrying amount may not be recoverable. An asset's carrying amount is written down immediately to its recoverable amount if the asset's carrying amount is greater than its estimated recoverable amount.

The recoverable amount is the higher of the asset's fair value less costs to sell or value in use.

Gains and losses on disposals are determined by comparing proceeds with asset carrying amount. These gains and (losses) are included in other operating income (expenses) in the income statement.

N- Impairment of non-financial assets

Assets having no fixed useful life except for goodwill shall not be amortized, and their impairment shall be tested at least annually. The impairment of amortized assets is studied to determine if there are events or changes in the circumstances indicating that the book value may not be recoverable.

The impairment loss is recognized by the excess amount of book value over the realizable value. The recoverable value represents net realizable value of the asset or the usage amount whichever is higher. For the purpose of estimating the impairment, the asset is grouped with the smallest cash generating unit. At each balance sheet date, non-financial assets with impairment has to be reviewed to determine if there is impairment reversal made to the income statement at the date of preparing the financial statements .

O - Leasing

O -1 As a lessee

Lease payments made under operating leases, net of any discounts received from the lessor, are recognized as an expense in the profit or loss on a straight-line basis over the lease term.

O -2 As a lessor

Assets leased out under operating lease contracts are reported as part of the property, plant and equipment in the statement of financial position and are depreciated over the expected useful lives of the assets, on the same basis as other property assets. Lease rental income is recognized in profit or loss, net of any discounts granted to the lessee, using the straight line method over the contract term

P-Cash and cash equivalents

For the purposes of the cash flows statement, cash and cash equivalents include balances due within three months from date of acquisition, cash and balances due from the Central Bank of Egypt other than the mandatory reserve, and current accounts at banks, treasury bills, and other governmental notes.

Q- Other provisions

Provisions for restructuring costs and legal claims are recognized when the bank has a present legal or constructive obligation as a result of past events; it is more likely than not that an outflow of resources will be required to settle the obligation and the amount has been reliably estimated. Where there are a number of similar obligations, the likelihood that an outflow is required to settle an obligation is determined taking into consideration the group of obligations as a whole. A provision is recognized even if the likelihood of an outflow with respect to any obligation in the group is minimal. The provision no longer required is recorded with other operating revenues (expenses).

R- Staff Benefits

Employees benefits as follows:

- Wages and Salaries, paid annual leave, and rewards (if accrued within 12 month)
 - Non monetary benefits (transportations allowance, medical care and insurance) for current employees
- The Bank recognizes the defined benefit as an expense in the income statement.

S- Income tax

The income taxes on the year's profits or losses include the tax of the current year and the deferred tax and they are recognized in the income statement with the exception of the income tax on the items of shareholder's equity which is directly recognized within equity.

The income tax is recognized on the basis of the net profit subject to tax through the application of enacted tax rates at the date of preparing the balance sheet in addition to the tax adjustments related to previous years.

Deferred taxes are recognized from temporary timing differences between the book value of assets and liabilities according to accounting bases and their values according to tax bases. Deferred tax assets and liabilities are measured at the tax rates that are expected to apply in the period in which the ability is settled or the asset realized, based on tax rates that have been enacted or substantively enacted by the end of the reporting period.

The deferred tax assets are recognized when there is a likelihood to achieve taxable profits in the future through which this asset can be utilized. The value of deferred tax assets is reduced by the portion which will not realize the expected taxable benefit in the coming years, in case of the increase in expected taxable benefits the deferred tax assets should be increased within the limit of previous reduction.

T- Borrowing

Loans obtained by the bank initially recognized at fair value net of transactions cost incurred in connection with obtaining the loan. Subsequently the loans are measured by amortized cost. The difference between net proceeds and the amount to be paid over the borrowing period using the effective interest rate is to be recognized in the income statement.

U- Capital

U-1 Cost of capital

Issuance cost directly related to issuing new shares or issuing shares related to acquisition or share options is charged to shareholders' equity of total proceeds net of tax.

U-2 Dividends

Dividends are charged when declared by the General Assembly of shareholders. Those dividends include employees' share in the profits and the Board of Directors' bonus as prescribed by the articles of association and law.

V- Comparative figures

The comparative figures shall be re-classified, when necessary, to be in conformity with the changes to presentation used in the current year.

3- Financial Risk Management:

The bank, as a result of the activities it exercises, is exposed to various financial risks. Since the basis of financial activity is to accept risks; some risks or group of risks are analyzed, evaluated and managed together. The bank intends to strike a balance between the risk and return and to reduce the probable adverse effects on the bank's financial performance. The most important types of risks are credit risk, market risk, liquidity risk and other operating risks. The market risk comprises foreign currency exchange rates, interest rate risk and other pricing risks.

The risk management policies have been laid down to determine and analyze the risks, set limits to the risk and control them through reliable methods and updated systems. The bank regularly reviews the risk management policies and systems and amend them to they reflect the changes in market, products and services and the best updated applications. Those risks are managed by risk department in the light of policies approved by Board of Directors.

The risk department determines, evaluates and covers the financial risks, in collaboration with the bank's various operating units, and the Board of Directors provides written policies for management of risks as a whole, in addition to written policies covering specific risk areas, like credit risk, foreign exchange rate risk, interest rate risk, and using the financial derivative and non-derivative instruments. Moreover, the risk department is independently responsible for periodical review of risk management and control environment.

A- Credit risk

The bank is exposed to the credit risk which is the risk resulting from failure of one party to meet its contractual obligations towards the bank. The credit risk is considered to be the most significant risks for the bank. The bank set specific procedures to manage that risk. The credit risk is in the lending and investments activities which are represented by bank's assets contain debt instruments. The credit risk is also found in off balance sheet financial instruments, like loan commitment. The managing and monitoring process on credit risk is centralized at credit risk team management at credit risk department that prepare reports to Board of Directors and Head units on regular basis.

Credit risk measurement

Loans and credit facilities to customers

In measuring credit risk of loans and facilities to customers and to banks at a counterparty level, the bank reflects three components:

The 'probability of default' by the client or counterparty on its contractual obligations.

Current exposures to the counterparty and its likely future development, from which the bank derive the 'exposure at default'.

· The likely recovery ratio on the defaulted obligations (the 'loss given default').

These credit risk measurements, which reflect expected loss (the 'expected loss model') and are required by the Basel Committee on Banking Regulations and the Supervisory Practices (the Basel Committee), are embedded in the bank's daily operational management.

The operational measurements can be contrasted with impairment allowances required under EAS 26, which are based on losses that have been incurred at the balance sheet date (the 'incurred loss model') rather than expected losses.

The bank assesses the probability of default of individual counterparties using internal rating tools tailored to the various categories of counterparty. They have been developed internally and combine statistical analysis with credit officer judgment and are validated, where appropriate, by comparison with externally available data. Clients of the bank are segmented into four rating classes. The bank's rating scale, which is shown below, reflects the range of default probabilities defined for each rating class. This means that, in principle, exposures migrate between classes as the assessment of their probability of default changes. The rating tools are kept under review and upgraded as necessary. The bank regularly validates the performance of the rating and their predictive power with regard to default events.

Bank's internal ratings scale

Bank's rating	Description of the grade
1	Performing loans
2	Normal watching
3	Watch list
4	Non-performing loans

The amount of default represent the outstanding balances at the time when a late settlement occurred for example the loans expected amount of default represent its book value. For commitments, the default amount represents all actual withdrawals in addition to any withdrawals occurred till the date of the late payment if any

Loss given default or loss severity represents the bank expectation of the extent of loss on a claim should default occur. It is expressed as percentage loss per unit of exposure and typically varies by type of debtor, type and seniority of claim and availability of collateral or other credit mitigation.

Debt instruments, treasury bills and other governmental notes

For debt securities and other bills, external rating such as standard and poor's rating or their equivalents are used by bank treasury for managing of the credit risk exposures. The investments in those securities and bills are viewed as a way to gain a better credit quality mapping and maintain a readily available source to meet the funding requirement at the same time.

A-1 Limiting and preventing risks policies

The bank manages limits and controls concentrations of credit risk wherever they are identified in particular, to individual counterparties and banks, and to industries and countries.

The bank structures the levels of credit risk it undertakes by placing limits on the amount of risk accepted in relation to one borrower, or groups of borrowers, and to geographical and industry segments. Such risks are monitored on a revolving basis and subject to an annual or more frequent review, when considered necessary. Limits on the level of credit risk by borrower /group, product, industry sector and by country are approved quarterly by the Board of Directors.

The exposure to any one borrower including banks and brokers is further restricted by sub-limits covering on- and off balance sheet exposures, and daily delivery risk limits in relation to trading items such as forward foreign exchange contracts. Actual exposures against limits are monitored daily.

Exposure to credit risk is also managed through regular analysis of the ability of borrowers and potential borrowers to meet interest and capital repayment obligations and by changing these lending limits where appropriate.

The following are other controls used by the bank to limit the credit risk:

Collaterals

The bank employs a range of policies and practices to mitigate credit risk. The most traditional of these is the taking of security for funds advances, which is common practice. The bank implements guidelines on the acceptability of specific classes of collateral or credit risk mitigation. The principal collateral types for loans and facilities are:

- Mortgages over residential properties.
- Pledge on business assets like machinery and merchandise .
- Pledge in financial instruments like debt instrument and equity.

Longer-term finance and lending to corporate entities are generally secured; revolving individual credit facilities are generally unsecured. In addition, in order to minimize the credit loss the bank will seek additional collateral from the counterparty as soon as impairment indicators are noticed for the relevant individual loans and advances.

Collateral held as security for financial assets other than loans and facilities is determined by the nature of the instrument. Debt securities, treasury and other governmental notes are generally unsecured, with the exception of asset-backed securities and similar instruments, which are secured by portfolios of financial instruments.

Credit-related commitments

The primary purpose of these instruments is to ensure that funds are available to a customer as required. Guarantees and standby letters of credit carry the same credit risk as loans. Documentary and commercial letters of credit – which are written undertakings by the bank on behalf of a customer authorizing a third party to draw drafts on the bank up to a stipulated amount under specific terms and conditions – are collateralized by the underlying shipments of goods to which they relate and therefore carry less risk than a direct loan.

Commitments to extend credit represent unused portions of authorizations to extend credit in the form of loans, guarantees or letters of credit. With respect to credit risk on commitments to extend credit, the bank is potentially exposed to loss in an amount equal to the total unused commitments. However, the likely amount of loss is less than the total unused commitments, as most commitments to extend credit are contingent upon customers maintaining specific credit standards. The bank monitors the term to maturity of credit commitments because longer-term commitments generally have a greater degree of credit risk than shorter-term commitments.

A-2 Impairment and provisioning policies

The internal rating systems described in note (A-1) focus more on credit-quality from the beginning of validation activities. Only impairment provisions recognized at the balance sheet date for financial reporting purposes are losses that have been incurred and based on objective evidence of impairment as will be mentioned below. Due to the different methods applied, the amounts of incurred credit losses charged to the financial statements are usually lower than the expected amount determined by the expected loss used for Central Bank of Egypt's regulations (note A-5). The impairment provision appeared in the balance sheet at the end of the period is derived from the four internal rating grades. However, the majority of the impairment provision comes from the last two ratings. The table below shows the percentage of in-balance sheet items relating to loans and facilities and the related impairment provision for each rating:

A-3 Bank's rating

The Bank's policies require the identification of three stages of classifying financial assets measured at amortized cost, loan commitments and financial guarantees as well as debt instruments at fair value through other comprehensive income in accordance with changes in credit quality since initial recognition and thereafter measuring the impairment losses (expected credit losses) as follows:

The un-impaired financial asset is classified at initial recognition in the first stage and credit risk is monitored continuously by the Bank's credit risk management.

In the case of a significant increase in credit risk since the initial recognition, the financial asset is transferred to the second stage and the financial asset is not considered at this stage (the expected credit loss over the life of the asset without impairment).

In case of indications of impairment of the financial asset, it is transferred to the third stage. The Bank relies on the following indicators to determine whether there is objective evidence of impairment:

- A significant increase in the rate of return on the financial asset as a result of increased credit risk.
- Significant negative changes in the activity and financial or economic conditions in which the borrower operates.
- Scheduling request as a result of difficulties facing the borrower.
- Significant negative changes in actual or expected operating results or cash flows.
- Future economic changes affecting the borrower's future cash flows.
- Early indicators of cash flow / liquidity problems such as delays in servicing creditors / business loans.
- Cancellation of a direct facility by the bank due to the high credit risk of the borrower.

The impairment loss allowance reported in the financial position is derived from the four internal ratings. However, the majority of allowance derived from last two rating.

The following table illustrates the proportional distribution of loans and credit facilities reported in the financial position for each of internal ratings of the Bank and their relevant impairment losses:

	31 March 2022		31 December 2021	
	Loans & credit facilities	Provision for impairment loss	Loans & credit facilities	Provision for impairment loss
1-Performing loans	72.74%	2.44%	74.33%	4.06%
2-Regular watching	13.53%	5.59%	9.29%	0.96%
3-Watch List	5.65%	20.37%	8.19%	26.29%
4-Non performing loans	8.08%	71.60%	8.19%	68.69%
	100%	100%	100%	100%

A-5 The General model for measuring banking risks

In addition to the four categories of credit rating indicated in note (A-1), the management makes more detailed groups in accordance with the Central Bank of Egypt requirements. assets exposed to credit risk in these categories are classified according to detailed conditions and terms depending on information related to the customer, it's activity, financial position and payment schedules.

The bank calculates the provisions required for impairment of assets exposed to credit risk, including commitments relating to credit on the basis of rates determined by Central Bank of Egypt. In case, the provision required for impairment losses as per Central Bank of Egypt regulations exceeds the provision required for financial statements preparation purposes according to the Egyptian Accounting Standards, this increase shall be debited from the retained earnings to and credited to the "general banking risk reserve" under the equity caption. this reserve is regularly adjusted with this increase and decrease, to equal the amount of increase in the two provisions. This reserve is not distributable.

Note (31-c) shows the "general banking risk reserve" movement during the financial year.

Below is a statement of credit rating for firms as per internal valuation basis compared to Central Bank of Egypt valuation basis and the percentages of provisions required for impairment of assets exposed to credit risk.

CBE rating	Description	Required Provision %	Internal Rating	Internal Description
1	Low risk	0	1	Good debts
2	Moderate risks	1	1	Good debts
3	Satisfactory risks	1	1	Good debts
4	Appropriate risks	2	1	Good debts
5	Acceptable risks	2	1	Good debts
6	Marginally acceptable risks	3	2	Normal watch-list
7	Watch-list	5	3	Special watch-list
8	Substandard debts	20	4	Non-performing loans
9	Doubtful debts	50	4	Non-performing loans
10	Bad debts	100	4	Non-performing loans

A/6 Maximum limits for credit risk before collaterals**Items exposed to credit risk**

	31 March 2022	31 December 2021
	EGP.000	EGP.000
Due from Central Bank of Egypt (Net)	4 873 482	4 709 283
Due from banks (Net)	9 909 317	6 933 872
Treasury bills and other governmental notes (Net)	2 580 396	4 059 652
Loans and facilities to customers		
A-Individuals loans:		
Overdraft	159 562	164 969
Credit cards	30 827	29 842
Personal loans	1 930 381	1 594 627
B-Corporate loans including SMEs		
Overdraft	13 387 005	11 721 050
Direct loans	4 312 243	3 929 702
Syndicated loans	8 241 695	8 242 044
Provision for impairment loss	(2 390 799)	(2 210 590)
Interest in suspense	(446 770)	(407 410)
Interest under settlement	(298)	(513)
Debt instruments (Net)		
At fair value through comprehensive income	4 332 495	8 792 156
At amortized cost	10 022 075	5 275 016
Other financial assets	725 667	590 914
	57 667 278	53 424 614

Off balance sheet items exposed to credit risk:

	31 March 2022	31 December 2021
	EGP.000	EGP.000
Letters of guarantee and financial guarantees	8 245 354	7 825 962
Letters of credits	4 057 747	3 166 288
Total	12 303 101	10 992 250

The previous table represents the maximum limit of exposure without taking into consideration any financial guarantees. As for the balance sheet items, the listed amounts depend on the net book value presented in the balance sheet.

As illustrated in the previous table 4.48 % of the maximum limit exposed to credit risk arises from treasury bills against 7.60% in previous year. 17.19 % due from banks against 12.98% in previous year. 43.73 % from loans and facility to customers against 43.17% in previous year. 24.90 % investment of debt instruments against 26.33% in previous year .

The management has confidence in its abilities to continue of controlling and maintaining the minimum limit of credit risk resulted from loans, facilities and debt instruments portfolios on the basis of the following:

87.7% of the loans and facilities portfolio is classified in the highest two categories of the internal assessment (against 84.81 % in previous year).

90.34% of the loans and facilities portfolio is neither past due nor impaired (against 88.99 % in previous year).

Loans and facilities individually impaired reach EGP 2 259 million (against EGP 2 099 million in previous year).

More than 74.38 % (against 76.37 % in previous year), of the investment in debt instruments represent treasury bills and bonds on the Egyptian Government .

A/7 Loans and facilities

Loans and facilities are summarized according to the credit worthiness as follows:

Loans and facilities

	31 March 2022	31 December 2021
	EGP.000	EGP.000
Neither past due nor impaired	25 342 963	22 812 087
Past due not subject to impairment	451 940	770 981
Individually impaired	2 266 810	2 099 166
Total	28 061 713	25 682 234
Less		
Provision for impairment loss	(2 390 799)	(2 210 590)
Interest in suspense	(446 770)	(407 410)
Interest under settlement	(298)	(513)
	25 223 846	23 063 721

The total provision for impairment losses for loans and facilities at the end of the current fiscal period amounted to 2 390 799 thousand Egyptian pounds, compared to 2 210 590 thousand Egyptian pounds at the end of the comparison year. Of these, 1 722 046 thousand Egyptian pounds represents the provision for impairment losses for individual loans (stage 3) compared to 1 577 793 thousand Egyptian pounds at the end of the comparison year, and the rest represents the provision for impairment losses component (stage 1 and 2) in the credit portfolio of 668 753 thousand Egyptian pounds compared to 632 797 thousand Egyptian pounds at the end of the comparison year.

Disclosure no.(18) includes further information on the impairment losses provision of loans and facilities to customers.

As at 31 March 2022

Loans and facilities to customers :**Loans and facilities neither past due nor impaired**

The credit quality of the loans and advances portfolio with no past dues nor impairment is assessed with reference to the internal assessment adopted by the bank .

B- Market risk

The bank exposed to market risks which is the risk that the fair value or future cash flow fluctuation resulted from changes in market prices. Market risks arise from open market related to interest rate, currency, and equity products of which each is exposed to general and specific market movements and changes in sensitivity levels of market rates or prices such as interest rates, foreign exchange rates and equity instrument prices. The Bank divides its exposure to market risk into trading and non-trading portfolios.

Bank risk division is responsible for managing the market risks arising from trading and non-trading activities of which monitored by two separate teams. Regular reports are submitted to the Board of Directors and each business unit head periodically.

Trading portfolios include transactions where the bank deals direct with clients or with the market; non-trading portfolios primarily arise from managing assets and liabilities interest rate relating to retail transactions. These non-trading portfolios includes foreign exchange risk and equity instruments risks arising from the bank's held-to-maturity and available-for-sale investments portfolios.

B-1 Market risk measurement techniques

As part of market risk management, the bank undertakes various hedging strategies and enters into swaps to match the interest rate risk associated with the fixed-rate long-term loans if the fair value option been applied. The major measurement techniques used to measure and control market risk are outlined below:

Value at Risk

The bank applies a 'value at risk' methodology (VAR) for trading and non-trading portfolios to estimate the market risk of positions held and the maximum expected losses based on a number of assumptions for various changes in market conditions. The Board of Directors sets limits for the value of risk that may be accepted by the bank for trading and non- trading portfolios separately and monitored on daily basis by the bank's management.

VAR is a statistical estimation of the expected losses on the current portfolio from adverse market movements in which it represents the 'maximum' amount the bank expect to lose using confidence level (98%). Therefore there is statistical probability of (2%) that actual losses could be greater than the VAR estimation. The VAR module assumes that the holding period is ten days before closing the opening position. It also assumes that market movements during the holding period will be the same as ten days before. The bank's assessment of past movements is based on data for the past five years. The bank applies these historical changes in rates prices indicators directly to its current positions - this approach called historical simulation. Actual outcomes are monitored regularly to test the validity of the assumptions and factors used in the VAR calculation.

The use of this approach does not prevent losses from exceeding these limits if there are significant market movements.

As VAR considered a primary part of the bank's market risk control technique, VAR limits are established by the Board of Directors annually for all trading and non-trading transactions and allocated to business units. Actual values exposed to market risk are compared to the limits established by the bank and reviewed by the bank risk division on daily basis.

The quality of the VAR model is continuously monitored through examining the VAR results for trading portfolio and results are reported to the top management and Board of Directors.

Stress testing

Stress tests provide an indication of the potential size of losses that could arise under extreme market conditions. Therefore, the bank computes on daily basis trading stress VAR, combined with trading normal VAR, to capture the abnormal movements in the financial markets and to give more comprehensive picture of risk .the results of the stress tests are reviewed by executive management and Board of Directors.

Value Exposed to risk for trading portfolio according to type of risk:

EGP.000

Description	3 months till end of March 2022			12 month till end of December 2021		
	Average	Highest	Lowest	Average	Highest	Lowest
Foreign exchange risk	1 020	3 357	21	789	2 515	15
Equity instrument risk	9 954	11 331	7 753	9 664	11 331	7 753
Matual funds	2 453	2 607	2 262	2 536	2 760	2 373

The increase in value exposure to risk is related to the increase in rate of return in global market.

The above results for the value exposed to risk are calculated separately from said positions and historical cost for markets. The total value exposed to risk for trading and non-trading is not represent the value exposed to risk for the bank. This because the relation among kinds of portfolios and risks and different effect applied.

B-2 Foreign exchange rates fluctuations risk

The bank is exposed to the risk of fluctuations in foreign exchange rates on its financial position and cash flows. The board of directors has set limits of foreign currencies in total value for each position at the end of the day and also intraday which are controlled on the spot. The following table summarizes the extent of the bank's exposure to fluctuations in exchange rates risk at the end of the fiscal period. The said table includes the book value of financial instruments broken down into its component currencies:

B-3 Interest rate risk

Cash flow interest rate risk is the risk that the future cash flows of a financial instrument will fluctuate because of changes in market interest rates. Fair value interest rate risk is the risk that the value of a financial instrument will fluctuate because of changes in market interest rates. Interest margins may increase as a result of such changes but may profit decrease in the event that unexpected movements arise. The Board sets limits on the level of mismatch of interest rate reprising that may be undertaken which is monitored daily by bank risk division.

The table below summarizes the bank's exposure to interest rate risks. It includes the bank's financial instruments at carrying amounts categorized by the earlier of re-pricing or maturity dates:

C- Liquidity risk

Liquidity risk represents difficulty encountering the bank in meeting its financial commitments when they fall due and replace funds when they are withdrawn. This may results in failure in fulfilling the bank obligation to repay to the depositors and fulfilling lending commitments.

Liquidity risk management process

The bank's liquidity management process carried out by the bank risk division includes:

- Daily funding managed by monitoring future cash flows to ensure that all obligations can be met when due. This includes availability of liquidity as they due or to be borrowed to customers. the bank maintains an active presence in global money markets to ensure that the bank met its objective.
- The bank maintains a portfolio of highly marketable and diverse assets that assumed to be easily liquidated in the event of an unforeseen interruption of cash flow.
- Monitoring liquidity ratios compared to the internal requirements and Central Bank of Egypt requirements.
- Managing loans concentration and maturities.
- The main period for liquidity management is the next day, week and month. The bank calculates the expected cash flow for those periods for monitoring and reporting purposes. The starting point to calculate these expectations is analyzing the financial liabilities contractual dues and expected collections dates for the financial assets .

Assets and liabilities department monitors the mismatch between medium term assets, the level and nature of unused loans limits, overdraft utilizations, and the effect of contingent liabilities such as letters of guarantees and letters of credit.

Funding approach

Sources of liquidity are regularly reviewed by bank risk division to maintain a wide diversification by currency, geography, source, products, and terms.

D- Fair value of financial assets and liabilities

D-1 Financial instruments measured at fair value

The carrying amount of financial assets held for trading represents by fair value according to announced prices as at financial statements date. Changes in fair value of those assets are recognized in income statement included in net income from trading. Also the carrying amount of quoted financial assets that classified as FVOCI represents by fair value according to announced prices as at financial statements date. Changes in fair value of those assets are recognized in the statement of comprehensive income. Regarding unquoted financial assets or in case of no active market the valuation technique used (Discounted Cash Flow, Multiples Method). Changes in fair value of those assets are recognized in the statement of other comprehensive income.

D-2 financial instruments not measured at fair value

Due from banks

All Due from Banks are current balances with maturity of less than one year

Loans and facilities to customers

Loans and facilities to customers is presented less provisions for Impairment losses

Investment by amortised cost

Including governmental debt instrument listed in market therefore fair value can be determined according to market price.

Due to banks

All Due to Banks are current balances with maturity of less than one year

Customer deposits

Represent deposits with unspecified maturities which include non-interest bearing deposits

E -Capital management

The bank's objectives behind managing capital include elements other than equity shown in the balance sheet are represented in the following:

- Compliance with capital legal requirements in Arab Republic of Egypt.
- Protecting the bank's ability to continue as a going concern and enabling it to generate yield for shareholders and other parties dealing with the bank.
- Maintaining a strong capital base to enhance growth.

Capital adequacy and uses are reviewed on a daily basis according to the regulatory authority's requirements (Central Bank in Arab Republic of Egypt) by the bank's management through models based Basel committee for banking control instructions, these data are submitted to Central Bank of Egypt on quarterly basis.

Central Bank of Egypt requires the following from the bank:

- Maintaining a minimum amount of 5 billion pounds for the issued and paid up capital. The paid-up capital to the bank at the end of the current fiscal period amounted to EGP 2 904 326 thousand Egyptian pounds. In the light of compliance to this requirement and according to reconciliation plan the increase of EGP 695 674 thousand of paid capital are to be proved in commercial registry. after the increase the paid capital will become EGP 3 600 000 thousand.
- Maintaining a minimum capital adequacy ratio of 10%, calculated on the basis of the ratio between the sum of the capital elements and the sum of the elements of the assets and contingent liabilities weighted by the risk weights - the prudential pillar, and the minimum capital adequacy criterion is 12.5%.

The numerator in capital adequacy comprises the following 2 tiers:

- **Tier 1:** basic capital which comprises paid-up capital (net of treasury stock), plus: retained earnings and reserves resulting from profit appropriations (other than general reserve for banking risks & special reserve), less: any goodwill previously recognized and any carried forward losses, plus: the carrying amount of other comprehensive income.
- **Tier 2:** subordinated capital which comprises with equivalent amount of the loans provision for debt instrument / Loans and credit facilities at stage 1 which does not exceed 1.25% from the total risk-weighted average of assets and contingent liabilities, plus: the carrying amount of subordinated loans/deposits maturing over more than 5 years (provided that such carrying amount shall be reduced by 20 % of its value in each of the last five years of their maturity), in calculating number of the capital adequacy ratio, total value of tier 2 should not exceed total value of tier 1. also, total value of subordinated loan (deposits) should not exceed 50% of tier 1.

Assets are risk weighted at a range of 0 to 200%. Risk classification of these assets is based on the type of the debtor as to reflect the associated credit risk and after consideration of cash collaterals. The same treatment is applied for the off-balance sheet items which shall be adjusted to reflect the contingent nature of and potential loss on these amounts.

Capital adequacy Standard had been prepared based on Basel II requirements, and Central Bank of Egypt Board of Directors had approved in its meeting held on December 18, 2012, in accordance with the instructions of the Central Bank of Egypt for the capital adequacy ratio (Basel II)

The tables below summarizes the compositions of Tier 1, Tier 2 and the capital adequacy ratio based on Basel II:

Capital Adequacy Ratio

Tier one (basic and additional capital)

Share Capital earnings	3 600 000	3 600 000

Leverage financial ratio

Central Bank of Egypt Board of Directors had approved in its meeting held on 7 July 2015 on special supervisory instructions related to leverage ratio which maintaining a minimum level of leverage ratio of 3% to be reported in quarterly basis to be obligatory ratio started from year 2018.

This ratio will be included in Basel requirement Tier1 in order to maintain Egyptian Banking system strong and safe, as long to keep up with best international regulatory treatments.

Leverage financial ratio reflect relationship between Tier 1 for capital that is used in capital adequacy ratio (after exclusions) and other assets (on balance sheet and off-balance sheet) that are not risk weighted assets.

Ratio Elements

I- The numerator elements

The numerator consists of Tier 1 for capital that is used in capital adequacy ratio (after exclusions) in accordance with the requirements of the regulatory authority represented by the Central Bank of Egypt (CBE).

II- The denominator elements

The denominator consists of all bank assets (on balance sheet and off-balance sheet) according to financial statements called "Bank exposures" which include total the following:

On balance sheet exposure items after deducting some of Tier I Exclusions for capital base.

Derivatives contracts exposures.

Financing Financial papers operations exposures.

Off-balance sheet items (weighted by credit conversion factor).

Leverage financial ratio

Tier 1 Capital after exclusions

Total exposures on balance sheet	57 698 075	57 348 008
Total exposures off- balance sheet	10 260 699	5 709 734

Total exposures on balance sheet and off- balance sheet

4-Significant accounting estimates and assumptions

In the application of the bank's accounting policies, management is required to make judgments, estimates and assumptions about the carrying amounts of assets and liabilities that are not readily apparent from other sources. The estimates and associated assumptions are based on historical experience and other factors that are considered relevant. Actual results may differ from these estimates. The estimates and underlying assumptions are reviewed on an ongoing basis. Revisions to accounting estimates are recognized in the period in which the estimate is revised, if the revision affects only that period, or in the period of the revision and future years if the revision affects both current and future years.

The following are the key assumptions concerning the future, and other key sources of estimation uncertainty at the end of the reporting period that have a significant risk of causing a material adjustment to the carrying amounts of assets and liabilities within the next financial year.

A) Impairment of Loans and credit facilities (Expected Credit Loss)

The Bank reviews its Loans and credit facilities portfolio, at least, on a quarterly basis. Management uses its discretionary judgment in determining whether it is necessary to recognize impairment loss in the income statement. This requires it to identify any reliable evidence indicating measurable decline in the expected future cash flows from loan portfolio before identifying any decline for each individual loan. This evidence includes data indicating negative change in the ability of a portfolio of borrowers to repay the bank, or local and economic circumstances related to default. On scheduling future cash flows, the management use estimates based on previous experience related to impairment of assets having similar credit risks. Such experience refers to impairment similar to that of the portfolio in question. The methods and assumptions used in estimating both the amount and timing of the future cash flows are reviewed on a regular basis to minimize any discrepancy between the estimated loss and actual loss based on management given experience.

B) Debit instruments with amortized cost

Non-derivatives financial assets with fixed or determinable payments and fixed maturity are classified as held to maturity. This classification requires high degree of judgment; in return the bank tests the intent and ability to hold such investments to maturity. If the bank fails to hold such investments till maturity except for certain circumstances like selling an insignificant amount of held-to-maturity investments near to maturity date, then all held to maturity investment portfolio should be reclassified as available for sale which will be measured at fair value instead of amortized cost. In addition the bank should suspend classifying investments as held to maturity caption.

C) Income Tax

The Bank is subject to income taxes in several tax departments which require the use of a significant estimate to determine the total provision of the income taxes. There are some accounts and operations that are difficult to comprehensively determine the final tax on them. the Bank records obligations derived from the expected results of tax inspection based on estimates of the emergence probability of additional taxes. When there is a variance between the final taxes' result and the amounts previously recorded, these variances will affect the income tax and the deferred tax provision for the year in which the variance is identified

39 -Significant Events

The coronavirus ("COVID-19") pandemic has spread across various geographies globally, causing disruption to business and economic activities.COVID-19 has brought about uncertainties in the global economic environment. SCB is closely monitoring the situation and has activated its business continuity planning and other risk management practices to manage the potential business disruption COVID-19 outbreak may have on its operations and financial performance.

Based on the uncertainties caused by COVID-19 and in anticipation of the expected economic slowdown, SCB is closely monitoring the loan portfolio considering the relevant impact of COVID-19 on the qualitative and quantitative factors where determining the significant increase in Credit Risk is specifically for the exposures of the mostly affected sectors.

Accordingly, Suez Canal Bank has taken internal protective action by building up proper provisions as a mitigation plan for the COVID-19 impact on the loan portfolio as of end of March 2022. Further build up of provisions might be taken, precautionary, till the end of the grace period, till actual performance of the portfolio start revealing itself.
